

Section 1.1 · Ticket A

Name: Aurelia Polichio

Ticket A · Version 2

1

Use the graph scale. When the input is 3, what output is shown?

2

The graph shows the amount of fuel remaining in a car as distance driven increases. Identify the x-intercept and y-intercept as ordered pairs, and explain what each intercept means in this situation.

each out of time

x = Distance
y = Fuel

Section 1.1 • Ticket A

Name: Aurelia

Ticket A • Version 2

3

The graph shows the amount of water in a community pool over time. Identify the y-intercept as an ordered pair and explain what it means in this situation.

*ran out of time**y = water
x = time*

4

Start at the origin. Move 4 units left, then 9 units up. Write the ordered pair for the endpoint.

*(-4, 9)**II*

Section 1.1 • Ticket A

Name: Avi

Ticket A • Version 1

- 1 Start at the origin. Move 6 units up, then 8 units left. Write the ordered pair for the endpoint.

- 2 Use the graph scale. When the input is 8, what output is shown?

output is about 90-100?

Section 1.1 · Ticket A

Name: Avi Anciso

Ticket A · Version 1

3

The graph shows the amount of water remaining in a tank as it drains. Identify the x-intercept and y-intercept as ordered pairs, and explain what each intercept means in this situation.

4

The graph shows the mass stored in a bin over days. Identify the y-intercept as an ordered pair and explain what it means in this situation.

Section 1.1 • Ticket A

Name: Quinten

Ticket A • Version 1

- 1 Start at the origin. Move 6 units up, then 8 units left. Write the ordered pair for the endpoint.

 $(-8, 6)$

- 2 Use the graph scale. When the input is 8, what output is shown?

95

Section 1.1 · Ticket A

Name: _____

Ticket A · Version 1

3

The graph shows the amount of water remaining in a tank as it drains. Identify the x-intercept and y-intercept as ordered pairs, and explain what each intercept means in this situation.

how many
Liters a
minute

4

The graph shows the mass stored in a bin over days. Identify the y-intercept as an ordered pair and explain what it means in this situation.

Section 1.1 • Ticket A

Name: Avery Smith

Ticket A • Version 1

- 1 Start at the origin. Move 6 units up, then 8 units left. Write the ordered pair for the endpoint.

 $(6, 8)$

- 2 Use the graph scale. When the input is 8, what output is shown?

4

Section 1.1 • Ticket A

Name: _____

Ticket A • Version 1

3

The graph shows the amount of water remaining in a tank as it drains. Identify the x-intercept and y-intercept as ordered pairs, and explain what each intercept means in this situation.

ran out of
time also don't
remember

Theresa

4

The graph shows the mass stored in a bin over days. Identify the y-intercept as an ordered pair and explain what it means in this situation.

Section 1.1 • Ticket A

Name: Garin Polcyn

Ticket A • Version 1

1

Start at the origin. Move 6 units up, then 8 units left. Write the ordered pair for the endpoint.

 $(-8, 6)$

2

Use the graph scale. When the input is 8, what output is shown?

 $output = 95$

Section 1.1 · Ticket A

Name: Garin Polyn

Ticket A · Version 1

3

The graph shows the amount of water remaining in a tank as it drains. Identify the x-intercept and y-intercept as ordered pairs, and explain what each intercept means in this situation.

 $(8, 0)$

The y intercept means the tanks starting water

The x intercept means how long the tank has been leaking

4

The graph shows the mass stored in a bin over days. Identify the y-intercept as an ordered pair and explain what it means in this situation.

 $(0, 40)$

it means starting mass.

Section 1.1 • Ticket A

Name: Trent Riley

Ticket A • Version 4

1

The graph shows elevation along a trail as distance increases. Identify the y-intercept as an ordered pair and explain what it means in this situation.

mi At
5, 60

every 5 miles
it will go up
60ft

2

Start at the origin. Move 6 units up, then 5 units left. Write the ordered pair for the endpoint.

$(-5, 6)$

Section 1.1 · Ticket A

Name: _____

Ticket A · Version 4

3

Use the graph scale. When the input is 8, what output is shown?

output is
90

4

The graph shows the depth of snow as it melts over several days. Identify the x-intercept and y-intercept as ordered pairs, and explain what each intercept means in this situation.

every 0.5
days the
snow melts
1.5 in

Section 1.1 • Ticket A

Name: October09.11.26

Ticket A • Version 3

- 1 The graph shows the height of a candle as it burns. Identify the x-intercept and y-intercept as ordered pairs, and explain what each intercept means in this situation.

$$x = (9, 0)$$

$$y = (0, 18)$$

The y is before
the candle got
lit, the x is
when it melted
all the way

- 2 The graph shows the amount of water in a community pool over time. Identify the y-intercept as an ordered pair and explain what it means in this situation.

$$(0, 70)$$

It means the
pool started out
with 70 liters
of water

Section 1.1 • Ticket A

Name: _____

Ticket A • Version 3

3

Start at the origin. Move 7 units left, then 5 units up. Write the ordered pair for the endpoint.

 $(-7, 5)$

II

4

Use the graph scale. When the input is 5, what output is shown?

50

Section 1.1 • Ticket A

Name: Rickie

Ticket A • Version 2

1

Use the graph scale. When the input is 3, what output is shown?

2

The graph shows the amount of fuel remaining in a car as distance driven increases. Identify the x-intercept and y-intercept as ordered pairs, and explain what each intercept means in this situation.

Section 1.1 • Ticket A

Name: _____

Ticket A • Version 2

3

The graph shows the amount of water in a community pool over time. Identify the y-intercept as an ordered pair and explain what it means in this situation.

(0, 75)
every minute
10 L is lost

4

Start at the origin. Move 4 units left, then 9 units up. Write the ordered pair for the endpoint.

(-4, 9)

Section 1.1 • Ticket A

Name: Talissa B

Ticket A • Version 4

1

The graph shows elevation along a trail as distance increases. Identify the y-intercept as an ordered pair and explain what it means in this situation.

?
when increasing

2

Start at the origin. Move 6 units up, then 5 units left. Write the ordered pair for the endpoint.

(-5, 6)

Section 1.1 • Ticket A

Name: _____

Ticket A • Version 4

- 3 Use the graph scale. When the input is 8, what output is shown?

- 4 The graph shows the depth of snow as it melts over several days. Identify the x-intercept and y-intercept as ordered pairs, and explain what each intercept means in this situation.

Section 1.1 • Ticket A

Name: mylth

Ticket A • Version 3

3

Start at the origin. Move 7 units left, then 5 units up. Write the ordered pair for the endpoint.

$(-7, 5)$
II

4

Use the graph scale. When the input is 5, what output is shown?

50

Section 1.1 • Ticket A

Name: myth

Ticket A • Version 3

1

The graph shows the height of a candle as it burns. Identify the x-intercept and y-intercept as ordered pairs, and explain what each intercept means in this situation.

18 cm in
9 hrs

2

The graph shows the amount of water in a community pool over time. Identify the y-intercept as an ordered pair and explain what it means in this situation.

70 liters
in 12 min

Section 1.1 • Ticket A

Name: Chase Adams

Ticket A • Version 3

1

The graph shows the height of a candle as it burns. Identify the x-intercept and y-intercept as ordered pairs, and explain what each intercept means in this situation.

$y = \text{height}$
 $x = \text{time}$

It identifies the amount of height in a certain hours.

2

The graph shows the amount of water in a community pool over time. Identify the y-intercept as an ordered pair and explain what it means in this situation.

$y = \text{water}$

It explains how much water in a certain time

Section 1.1 • Ticket A

Name: _____

Ticket A • Version 3

3

Start at the origin. Move 7 units left, then 5 units up. Write the ordered pair for the endpoint.

$(-7, 5)$

4

Use the graph scale. When the input is 5, what output is shown?

50

50

Section 1.1 • Ticket A

Name: K. Agan

Ticket A • Version 2

1

Use the graph scale. When the input is 3, what output is shown?

(35)

2

The graph shows the amount of fuel remaining in a car as distance driven increases. Identify the x-intercept and y-intercept as ordered pairs, and explain what each intercept means in this situation.

 $12\text{ gal} = 300\text{ mi}$ $1\text{ gallon} = 50\text{ miles}$

Section 1.1 • Ticket A

Name: _____

Ticket A • Version 2

3

The graph shows the amount of water in a community pool over time. Identify the y-intercept as an ordered pair and explain what it means in this situation.

Idk

4

Start at the origin. Move 4 units left, then 9 units up. Write the ordered pair for the endpoint.

Section 1.1 • Ticket A

Name: Jalon, Saugie

Ticket A • Version 4

1

The graph shows elevation along a trail as distance increases. Identify the y-intercept as an ordered pair and explain what it means in this situation.

it shows how far
he walked in
the amount of
time it took

2

Start at the origin. Move 6 units up, then 5 units left. Write the ordered pair for the endpoint.

Section 1.1 • Ticket A

Name: Jaron Sawgic

Ticket A • Version 4

3

Use the graph scale. When the input is 8, what output is shown?

4

The graph shows the depth of snow as it melts over several days. Identify the x-intercept and y-intercept as ordered pairs, and explain what each intercept means in this situation.

It decreases
3 in every time
in the day

Section 1.1 • Ticket A

Name: Bailyn

Ticket A • Version 3

- 1 The graph shows the height of a candle as it burns. Identify the x-intercept and y-intercept as ordered pairs, and explain what each intercept means in this situation.

 $(0, 18)$ $(9, 0)$

The start and the end

- 2 The graph shows the amount of water in a community pool over time. Identify the y-intercept as an ordered pair and explain what it means in this situation.

 $(0, 70)$

The start of the pool

Section 1.1 • Ticket AName: Railyn

Ticket A • Version 3

3

Start at the origin. Move 7 units left, then 5 units up. Write the ordered pair for the endpoint.

 $(-7, 5)$ **4**

Use the graph scale. When the input is 5, what output is shown?

 $(5, 50)$

50

Section 1.1 • Ticket A

Name: NOVA M

Ticket A • Version 2

1

Use the graph scale. When the input is 3, what output is shown?

2

The graph shows the amount of fuel remaining in a car as distance driven increases. Identify the x-intercept and y-intercept as ordered pairs, and explain what each intercept means in this situation.

Section 1.1 • Ticket A

Name: _____

Ticket A • Version 2

3

The graph shows the amount of water in a community pool over time. Identify the y-intercept as an ordered pair and explain what it means in this situation.

as time goes
on less water is
in the pool

4

Start at the origin. Move 4 units left, then 9 units up. Write the ordered pair for the endpoint.

$(-4, 9)$

Section 1.1 • Ticket A

Name: Emma Lynn Gilles

Ticket A • Version 4

1

The graph shows elevation along a trail as distance increases. Identify the y-intercept as an ordered pair and explain what it means in this situation.

(0 mi, 40 ft)

2

Start at the origin. Move 6 units up, then 5 units left. Write the ordered pair for the endpoint.

(-5, 6)

Section 1.1 • Ticket A

Name: _____

Ticket A • Version 4

3

Use the graph scale. When the input is 8, what output is shown?

90

4

The graph shows the depth of snow as it melts over several days. Identify the x-intercept and y-intercept as ordered pairs, and explain what each intercept means in this situation.

15 in
5 day

Section 1.1 • Ticket A

Name: Charly H d/1/1/21

Ticket A • Version 3

3

Start at the origin. Move 7 units left, then 5 units up. Write the ordered pair for the endpoint.

$(-7, 5)$

Ch 2, 4, 4, 20

117, 37

4

Use the graph scale. When the input is 5, what output is shown?

50

Section 1.1 • Ticket A

Name: Chunhy.H 9/11/26

Ticket A • Version 3

1

The graph shows the height of a candle as it burns. Identify the x-intercept and y-intercept as ordered pairs, and explain what each intercept means in this situation.

X intr- ~~18~~ 9
 y intr- ~~18~~ 18
 intercept
 is how many
 hours it takes for something to stop or run out.

2

The graph shows the amount of water in a community pool over time. Identify the y-intercept as an ordered pair and explain what it means in this situation.

y intr = 70 (0, 70)
 The y intercept
 in this situation
 is how much water
 in Liters are in
 the community
 Pool.

Section 1.1 • Ticket A

Name: Morgan Stamp

Ticket A • Version 3

- 1 The graph shows the height of a candle as it burns. Identify the x-intercept and y-intercept as ordered pairs, and explain what each intercept means in this situation.

X intercept $(9, 0)$

Y intercept $(0, 18)$

The X intercept is $(9, 0)$ because it doesn't move up

Y intercept is $(0, 18)$ because it only moves up on y-axis

- 2 The graph shows the amount of water in a community pool over time. Identify the y-intercept as an ordered pair and explain what it means in this situation.

$(0, 70)$

Section 1.1 · Ticket A

Name: Morgan

Ticket A · Version 3

3

Start at the origin. Move 7 units left, then 5 units up. Write the ordered pair for the endpoint.

 $(-7, 5)$

4

Use the graph scale. When the input is 5, what output is shown?

in	out
5	50

Section 1.1 • Ticket A

Name: SAMMON

Ticket A • Version 4

1

The graph shows elevation along a trail as distance increases. Identify the y-intercept as an ordered pair and explain what it means in this situation.

The y intercept
is showing the
elevation.
From 40 to 80

2

Start at the origin. Move 6 units up, then 5 units left. Write the ordered pair for the endpoint.

Section 1.1 • Ticket A

Name: _____ Ticket A • Version 4

3

Use the graph scale. When the input is 8, what output is shown?

(90, 8) I think?

4

The graph shows the depth of snow as it melts over several days. Identify the x -intercept and y -intercept as ordered pairs, and explain what each intercept means in this situation.

in 12 hours
it goes down 0.5
in a day it
goes down 1. in
5 days it goes
down 5.

Section 1.1 • Ticket A

Name: Hannah Noteware

Ticket A • Version 2

1

Use the graph scale. When the input is 3, what output is shown?

It is about 32-35

2

The graph shows the amount of fuel remaining in a car as distance driven increases. Identify the x-intercept and y-intercept as ordered pairs, and explain what each intercept means in this situation.

There was 12 gallons of fuel ~~was~~ to begin with then it started going down because the d's tank they had gone, they had gone 30 miles.

Section 1.1 • Ticket A

Name: Hannah Notewac

Ticket A • Version 2

3

The graph shows the amount of water in a community pool over time. Identify the y-intercept as an ordered pair and explain what it means in this situation.

It means that there was 70 liters of water and it takes about 10 minutes to fill it. Think???

4

Start at the origin. Move 4 units left, then 9 units up. Write the ordered pair for the endpoint.

$(-4, 9)$

Section 1.1 · Ticket A

Name: Arah DePoni

Ticket A · Version 1

- 3 The graph shows the amount of water remaining in a tank as it drains. Identify the x-intercept and y-intercept as ordered pairs, and explain what each intercept means in this situation.

$$y = (0, 80)$$

$$x = (8, 0)$$

On day zero there was 80L of water and on day 8 there was zero L of water

- 4 The graph shows the mass stored in a bin over days. Identify the y-intercept as an ordered pair and explain what it means in this situation.

$$y = (0, 40)$$

that on day 0 there was 40 kg of mass

Section 1.1 • Ticket A

Name: Anah Deboni

Ticket A • Version 1

1

Start at the origin. Move 6 units up, then 8 units left. Write the ordered pair for the endpoint.

$(-8, 6)$

2

Use the graph scale. When the input is 8, what output is shown?

45

Section 1.1 • Ticket A

Name: Josh

Ticket A • Version 2

Use the graph scale. When the input is 3, what output is shown?

(3, 35)

The graph shows the amount of fuel remaining in a car as distance driven increases. Identify the x-intercept and y-intercept as ordered pairs, and explain what each intercept means in this situation.

$x = \text{Distance}$

$y = \text{Fuel}$

Section 1.1 • Ticket A

Name: _____

Ticket A • Version 2

3

The graph shows the amount of water in a community pool over time. Identify the y-intercept as an ordered pair and explain what it means in this situation.

**4**

Start at the origin. Move 4 units left, then 9 units up. Write the ordered pair for the endpoint.

$(-4, 9)$

Section 1.1 • Ticket A

Name: Alex

Ticket A • Version 1

- 1 Start at the origin. Move 6 units up, then 8 units left. Write the ordered pair for the endpoint.

 $(-8, 6)$

- 2 Use the graph scale. When the input is 8, what output is shown?

95?

Section 1.1 · Ticket A

Name: Alex

Ticket A · Version 1

3

The graph shows the amount of water remaining in a tank as it drains. Identify the x-intercept and y-intercept as ordered pairs, and explain what each intercept means in this situation.

$$y = (0, 80)$$

$$x = (8, 0)$$

x intercept is amount of water?

x intercept is time?

4

The graph shows the mass stored in a bin over days. Identify the y-intercept as an ordered pair and explain what it means in this situation.

$$(0, 40)$$

x is time?

y is mass?

Section 1.1 • Ticket A

Name: Natalie Wissner

Ticket A • Version 3

- 1 The graph shows the height of a candle as it burns. Identify the x-intercept and y-intercept as ordered pairs, and explain what each intercept means in this situation.

$(0, 18) \rightarrow$ at zero time burned the candle is 18 cm tall

$(9, 0) \rightarrow$ at nine hours the candle is zero cm tall

- 2 The graph shows the amount of water in a community pool over time. Identify the y-intercept as an ordered pair and explain what it means in this situation.

$(0, 70) \rightarrow$ it means the pool is 70 liters full at zero hours used

Section 1.1 • Ticket A

Name: _____

Ticket A • Version 3

3

Start at the origin. Move 7 units left, then 5 units up. Write the ordered pair for the endpoint.

 $(7, 5)$

Loc R first
U or D. last

4

Use the graph scale. When the input is 5, what output is shown?

 $(5, 50)$

Section 1.1 • Ticket A

Name: loney

Ticket A • Version 4

1

The graph shows elevation along a trail as distance increases. Identify the y-intercept as an ordered pair and explain what it means in this situation.

it means how
much elevation
there is

2

Start at the origin. Move 6 units up, then 5 units left. Write the ordered pair for the endpoint.

(5, -6)

Section 1.1 • Ticket A

Name: _____ Ticket A • Version 4

3

Use the graph scale. When the input is 8, what output is shown?

4

The graph shows the depth of snow as it melts over several days. Identify the x-intercept and y-intercept as ordered pairs, and explain what each intercept means in this situation.

Section 1.1 · Ticket A

Name: Danielle Washburn

Ticket A · Version 1

- 1 Start at the origin. Move 6 units up, then 8 units left. Write the ordered pair for the endpoint.

 $(-8, 6)$

- 2 Use the graph scale. When the input is 8, what output is shown?

94

Section 1.1 • Ticket A

Name: Daniell Washburn

Ticket A • Version 1

3

The graph shows the amount of water remaining in a tank as it drains. Identify the x-intercept and y-intercept as ordered pairs, and explain what each intercept means in this situation.

$$x = 8 \text{ minutes/Time}$$
$$y = 80 \text{ liters/water}$$

4

The graph shows the mass stored in a bin over days. Identify the y-intercept as an ordered pair and explain what it means in this situation.

$$40 \text{ kg/mass}$$

Section 1.1 • Ticket A

Name: Bavin L. sep 11 Ticket A • Version 2

1

Use the graph scale. When the input is 3, what output is shown?

2

The graph shows the amount of fuel remaining in a car as distance driven increases. Identify the x-intercept and y-intercept as ordered pairs, and explain what each intercept means in this situation.

300 distance
12 Fuel

Section 1.1 • Ticket A

Name: _____

Ticket A • Version 2

3

The graph shows the amount of water in a community pool over time. Identify the y-intercept as an ordered pair and explain what it means in this situation.

12 time
70 water

4

Start at the origin. Move 4 units left, then 9 units up. Write the ordered pair for the endpoint.

Section 1.1 • Ticket A

Name: Riley L

Ticket A • Version 2

1

Use the graph scale. When the input is 3, what output is shown?

35

2

The graph shows the amount of fuel remaining in a car as distance driven increases. Identify the x-intercept and y-intercept as ordered pairs, and explain what each intercept means in this situation.

 $Y = (0, 12)$ $X = (300, 0)$

Section 1.1 • Ticket A

Name: _____

Ticket A • Version 2

3

The graph shows the amount of water in a community pool over time. Identify the y-intercept as an ordered pair and explain what it means in this situation.

$$y = (0, 70)$$

it means there's
70 L of water
at the beginning

4

Start at the origin. Move 4 units left, then 9 units up. Write the ordered pair for the endpoint.

$$(-4, 9)$$

Section 1.1 • Ticket A

Ticket A • Version 1

- 1 Start at the origin. Move 6 units up, then 8 units left. Write the ordered pair for the endpoint.

(8, 6)

Q II

- 2 Use the graph scale. When the input is 8, what output is shown?

I don't
know at all

Section 1.1 · Ticket A

Name: _____

Ticket A · Version 1

3

The graph shows the amount of water remaining in a tank as it drains. Identify the x-intercept and y-intercept as ordered pairs, and explain what each intercept means in this situation.

I don't
know

4

The graph shows the mass stored in a bin over days. Identify the y-intercept as an ordered pair and explain what it means in this situation.

I don't
know how
to use graphs

Section 1.1 • Ticket A

Name: DAMIAN

Ticket A • Version 3

1

The graph shows the height of a candle as it burns. Identify the x-intercept and y-intercept as ordered pairs, and explain what each intercept means in this situation.

$$x = (0, 18)$$

$$y = (9, 0)$$

It shows how long the candle burns, and how much its height decreases.

2

The graph shows the amount of water in a community pool over time. Identify the y-intercept as an ordered pair and explain what it means in this situation.

$$x = (0, 70)$$

$$y = (12, 35)$$

It shows how much water the pool loses over time.

Section 1.1 • Ticket A

Name: _____

Ticket A • Version 3

3

Start at the origin. Move 7 units left, then 5 units up. Write the ordered pair for the endpoint.

 $(-7, 5)$

4

Use the graph scale. When the input is 5, what output is shown?

 $(5, 50)$

Section 1.1 • Ticket A

Name: Kairi Withey Ticket A • Version 3

- 1 The graph shows the height of a candle as it burns. Identify the x-intercept and y-intercept as ordered pairs, and explain what each intercept means in this situation.

$18 = y$ $9 = x$
 9 is the time (hr) the candle burn. 18 is the height the candle is.

- 2 The graph shows the amount of water in a community pool over time. Identify the y-intercept as an ordered pair and explain what it means in this situation.

$70 = y$ $12 = x$
 12 is the time (min) the water was in the pool. 70 is the water (L) in the pool.

Section 1.1 • Ticket A

Name: _____

Ticket A • Version 3

3

Start at the origin. Move 7 units left, then 5 units up. Write the ordered pair for the endpoint.

Use the graph scale. When the input is 5, what output is shown?

 $6 = \text{output}$
 $5 = \text{input}$

Section 1.1 • Ticket A

Name: Charlotte Wells

Ticket A • Version 1

- 1 Start at the origin. Move 6 units up, then 8 units left. Write the ordered pair for the endpoint.

 $(-8, 6)$

- 2 Use the graph scale. When the input is 8, what output is shown?

Section 1.1 • Ticket A

Name: Charlotte Wells

Ticket A • Version 1

3

The graph shows the amount of water remaining in a tank as it drains. Identify the x-intercept and y-intercept as ordered pairs, and explain what each intercept means in this situation.

x intercept:

 $(8, 0)$

y intercept:

 $(0, 80)$

80 liters of water will be at 0 in 8 minutes

4

The graph shows the mass stored in a bin over days. Identify the y-intercept as an ordered pair and explain what it means in this situation.

 $(0, 40)$

the y intercept shows that at day 0 there is 40 kg of mass in a bin

Section 1.1 · Ticket A

Name: Sofia Booms

Ticket A · Version 3

- 1 The graph shows the height of a candle as it burns. Identify the x-intercept and y-intercept as ordered pairs, and explain what each intercept means in this situation.

$$x: (9, 0)$$

$$y: (0, 18)$$

at 9 hours,
the candle's height
will be 0.

At 0 hours, the
candle was 18 cm.

- 2 The graph shows the amount of water in a community pool over time. Identify the y-intercept as an ordered pair and explain what it means in this situation.

$$(0, 70)$$

At 0 minutes, there
is 70 L of water
in the pool.

Section 1.1 · Ticket A

Name: _____

Ticket A · Version 3

3

Start at the origin. Move 7 units left, then 5 units up. Write the ordered pair for the endpoint.

The graph shows the height of a candle as it burns. Identify the x-intercept and y-intercept as ordered pairs, and explain what each intercept means in this situation.

2

The graph shows the amount of water in a community pool over time. Identify the y-intercept as an ordered pair and explain what it means in this situation.

Section 1.1 • Ticket A

Name: Abelyn

Ticket A • Version 2

1

Use the graph scale. When the input is 3, what output is shown?

(around)
45

2

The graph shows the amount of fuel remaining in a car as distance driven increases. Identify the x-intercept and y-intercept as ordered pairs, and explain what each intercept means in this situation.

 $X = (300, 0)$ $y = (0, 12)$

y intercept shows how much fuel the car had at 0 distance.
x intercept shows how much fuel was left (0) at 300 mi

Section 1.1 • Ticket A

Name: _____

Ticket A • Version 2

3

The graph shows the amount of water in a community pool over time. Identify the y-intercept as an ordered pair and explain what it means in this situation.

$$y = (0, 70)$$

it means that after 0 minutes, there was still 70L of water.

4

Start at the origin. Move 4 units left, then 9 units up. Write the ordered pair for the endpoint.

$$(-4, 9)$$

Section 1.1 · Ticket A

Name: Payton Richley

Ticket A · Version 2

3

The graph shows the amount of water in a community pool over time. Identify the y-intercept as an ordered pair and explain what it means in this situation.

$(0, 70)$
 $(12, 10)$
the water
goes down
as time goes
up.

4

Start at the origin. Move 4 units left, then 9 units up. Write the ordered pair for the endpoint.

$(-4, 9)$

Section 1.1 • Ticket A

Name: Payton Richley

Ticket A • Version 2

1

Use the graph scale. When the input is 3, what output is shown?

 $(3, 35)$

2

The graph shows the amount of fuel remaining in a car as distance driven increases. Identify the x-intercept and y-intercept as ordered pairs, and explain what each intercept means in this situation.

 $(0, 12)$ $(300, 0)$

the intercept
is going down
because the fuel
is.

Section 1.1 • Ticket A

Name: _____

Vicko & 5 Lathers

Ticket A • Version 2

1

Use the graph scale. When the input is 3, what output is shown?

 $(2, 39)$

2

The graph shows the amount of fuel remaining in a car as distance driven increases. Identify the x-intercept and y-intercept as ordered pairs, and explain what each intercept means in this situation.

 $(300, 12)$

Section 1.1 • Ticket A

Name: _____

Ticket A • Version 2

3

The graph shows the amount of water in a community pool over time. Identify the y-intercept as an ordered pair and explain what it means in this situation.

65 L of Water

4

Start at the origin. Move 4 units left, then 9 units up. Write the ordered pair for the endpoint.

Section 1.1 • Ticket A

Name: Gloria Snider

Ticket A • Version 1

- 1 Start at the origin. Move 6 units up, then 8 units left. Write the ordered pair for the endpoint.

 $(-8, 6)$

- 2 Use the graph scale. When the input is 8, what output is shown?

130

Section 1.1 • Ticket A

Name: _____

Ticket A • Version 1

3

The graph shows the amount of water remaining in a tank as it drains. Identify the x-intercept and y-intercept as ordered pairs, and explain what each intercept means in this situation.

Time
(8, 80)
water

4

The graph shows the mass stored in a bin over days. Identify the y-intercept as an ordered pair and explain what it means in this situation.

Time
(6, 40)
mass

Section 1.1 • Ticket A

Name: Cameron Ticket A • Version 4

1

The graph shows elevation along a trail as distance increases. Identify the y-intercept as an ordered pair and explain what it means in this situation.

y intercept = 40

(0, 40)

went up 0 feet but
started at 40

2

Start at the origin. Move 6 units up, then 5 units left. Write the ordered pair for the endpoint.

$(-5, 6)$

Section 1.1 • Ticket A

Name: _____

Ticket A • Version 4

3

Use the graph scale. When the input is 8, what output is shown?

90

4

The graph shows the depth of snow as it melts over several days. Identify the x-intercept and y-intercept as ordered pairs, and explain what each intercept means in this situation.

 $x: 5 (5, 0)$ $y: 15 (0, 15)$

Section 1.1 · Ticket A

Name: _____

Ticket A · Version 1

- 1 Start at the origin. Move 6 units up, then 8 units left. Write the ordered pair for the endpoint.

- 2 Use the graph scale. When the input is 8, what output is shown?

105 maybe

Section 1.1 · Ticket A

Name: _____

Ticket A · Version 1

3

The graph shows the amount of water remaining in a tank as it drains. Identify the x-intercept and y-intercept as ordered pairs, and explain what each intercept means in this situation.

?

4

The graph shows the mass stored in a bin over days. Identify the y-intercept as an ordered pair and explain what it means in this situation.

?

Section 1.1 • Ticket A

Name: Mya Bell

Ticket A • Version 4

3

Use the graph scale. When the input is 8, what output is shown?

4

The graph shows the depth of snow as it melts over several days. Identify the x-intercept and y-intercept as ordered pairs, and explain what each intercept means in this situation.

TIME 5x and SNOW DEPTH 15y

Section 1.1 • Ticket A

Name: _____

Ticket A • Version 4

- 1 The graph shows elevation along a trail as distance increases. Identify the y-intercept as an ordered pair and explain what it means in this situation.

$$y = 40$$

- 2 Start at the origin. Move 6 units up, then 5 units left. Write the ordered pair for the endpoint.

$$(6, -5)$$

Section 1.1 • Ticket A

Name: Ella Schlafly

Ticket A • Version 4

1

The graph shows elevation along a trail as distance increases. Identify the y-intercept as an ordered pair and explain what it means in this situation.

 $(0, 40)$

The trail starts
at 40

2

Start at the origin. Move 6 units up, then 5 units left. Write the ordered pair for the endpoint.

 $(-5, 6)$

Section 1.1 • Ticket A
